DETAILED ACTION

Applicants' amendment dated 11/06/2006 has been received and entered. By the amendment, claims 1-12 are remain pending in the application.

Applicant's arguments with respect to claims 1, 3 and 8 have been considered but are moot in view of the new ground(s) of rejections as follow.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akamatsu et al., US Patent No. 6,414,730, in view of Hyun, US Patent No. 5,814,836.

The above claims are anticipated by Akamatsu et al. figures 1, 2A and accompanying text which discloses a liquid crystal display (LCD) device and a method for fabricating of the same comprising:

- . an insulating substrate (51);
- . a plurality of data lines (61);
- . a plurality of gate lines (60);
- . a gate insulating film (53);
- . a plurality of thin film transistors (TFTs) (62) having a gate electrode (52), a semiconductor layer (54) a source/drain electrode(s) (58/59);

Art Unit: 2871

. a pixel region with a pixel electrode (69) as claimed (e.g., directly contacted the insulating substrate 51, a drain electrode 59.

Akamatsu et al., however, do not disclose the pixel electrode being directly contacted an upper part of the drain electrode over the semiconductor layer. Hyun does disclose an upper part (e.g. upper surface) of a drain electrode (143b) can be formed over a semiconductor layer (137/139). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ a drain electrode over a semiconductor layer as shown by Hyun, so as the Akamatsu et al. pixel electrode would directly contacts an upper part of the drain electrode that is over a semiconductor layer as claimed, in order to improve yield and simplify the manufacturing process (col. 4, ln 14-15).

It should be noted that the method of manufacturing the device is merely a list of forming each component and each component must be formed to make the device, the method of manufacturing would be inherent to the device.

Conclusion

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period

Art Unit: 2871

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
